Technical Data Sheet

RW137

TremDuct

19-11-2026 / V 5

Description

RW137 is a prefabricated, cable penetration unit manufactured from stainless steel and rigid PVC that includes an integral membrane flange.

Features and Benefits

- Effective roof top service penetration
- Robust stainless steel construction
- Integrated membrane flange allows for flush detailing

Usage Purpose

RW137 cable penetration units are specifically designed to create a robust and weatherproof service penetration for cables or conduits passing through flat roof constructions.

Packaging

Units are boxed. Quantity and design subject to project.

Application

RW137 consists of 2 components: Stainless steel base spigot with pre-drilled fixing holes and a rigid PVC U-bend. Factory laminated integral membrane flange. Firstly locate the pre-drilled holes in the stainless steel base plate and secure with substrate specific screws into solid grounds. The integral membrane flange should be dressed into the proposed membrane system as per Tremco specification guidelines. Avoid prominent laps where possible.

Guarantee / Warranty

Tremco CPG UK Limited products are manufactured to rigid standards of quality. Any product which has been applied (a) in accordance with Tremco CPG UK Limited written instructions and (b) in any application recommended by Tremco CPG UK Limited, but which is proved to be defective, will be replaced free of charge.
Tremco CPG UK Limited reserves the right to alter product specifications without prior notice, in line with Company policy of continuous development and improvement.
