Reference:	P4	P4 Party Head, Standard Wall	
Description:	PHPP only, ICF Wall, Party Head		
	Claddi	ng:	Slates/ tiles and battens
full construction)	Roof:		375mm mineral wool (nominal) , $\lambda$ = 0.040
Specification: (see detail below for	Insulat	tion:	2x 67mm layers of EPS, λ = 0.036
General Constructio	n Party \	Wall:	152mm (nominal) Dense Concrete Core, λ<=2.00

Linear Thermal Transmittance W/m.K		
Ψ=	0.103	

Temperature Factor <sup>3</sup> for Humidity and			
Mould			
f=	0.953		

Calculation Prepared By: Matthew Wright MA Physics (Oxon) PGCE

**Notes:** Calculation based upon internal heat loss areas, applicable in UK Building Regulations and SAP calculations. Party values are per dwelling, that is, they have already been halved.

- 1.  $\Psi$  and f are only valid for the detail drawn and described above.
- The Ψ and f quoted are considered valid for U-value(s) Roof>= 0.11 W/m².K, (allowance of +/- 20%, following the present guidance from B. Anderson, BRE, correspondence dated 24/02/2012, for the UK market). The use of different claddings may affect the U-value slightly, but will have no material impact on the calculated values used here, in this case.
- 3. In dwellings, UK regulations stipulate that a temperature factor, f, that is >0.75 would avoid the risk of mould growth.

  For other nations, jurisdictions and climates, please consult the local building regulations that apply for avoiding mould and condensation.

  (For example, typical requirements may be: Netherlands: 0.65; Switzerland: 0.75; Belgium: 0.7; Germany: 0.7; Finland: 0.87. French, German and other standards often do not indicate a single number for acceptable risk, but are dependent on circumstances.)
- 4. Calculations have been performed in accordance with:
  - EN ISO 10211\_2007 (British Standards)
  - IP 1/06 & BR497 (BRE Press)

and with reference to the following publications:

EN ISO 6946 (British Standards)

BR443 (BRE Press)
