## Dryvit Wall Coatings and Finishes

Dryvit Systems, Inc. pioneered the first exterior insulation and finish system (EIFS) in North America referred to in the UK as External Wall Insulation (EWI). In the relatively short period of three decades, the company's products have been used on more than 300,000 new and retrofit projects. Dryvit finishes that are used with the full thermal component system can also be used separately to restore existing buildings. These decorative and functional coatings provide attractive new finishes, enhance or change existing colors and protect the surface from exposure. They can be applied to stucco, concrete, wood, painted metal, as well as over exterior insulation and finish systems. All Dryvit products are designed to require minimal maintenance. However, as with all building products depending on location, some cleaning may be required. See Dryvit publication RMS01A on cleaning and recoating. The chart below lists typical substrates and how they can be easily upgraded utilizing Dryvit products.

### 1. Decorative Coatings

Dryvit offers a wide range of decorative coatings for modernizing older buildings. They are available in many different colors as well as smooth and textured finishes. These products can be used over cementitious or masonry walls. All Dryvit coatings are durable, weather resistant, integrally colored and include DPR (Dirt Pickup Resistant) chemistry. Each is designed to improve curb appeal, minimize building maintenance and enhance the beauty of your building.

### 2. Protective Coatings

Weatherlastic products are decorative as well as functional. They are designed to form a durable, crack-resistant finish. The DPR coatings are highly elastic, water repellent and will help bridge hairline cracks. A wide range of integrally-colored finishes is available in a variety of textures. Weatherlastic™ products are ideally suited to coat and protect cementitious and masonry surfaces and existing EWI systems.

### 3. Surface Preparation and Leveling Coats

Irregular wall surfaces can be prepared, patched and leveled with specialized products from Dryvit. AC-100™, an all-purpose cement admixture, is ideal for use with patch and repair mortars, skim coats and stuccos. A simple trowelled application of Genesis or Genesis DM™ will level most wall surfaces to achieve a base for your choice of Dryvit finishes.

### Creative Concepts

Flat walls can be enhanced by using special expanded polystyrene shapes plus Dryvit exterior coatings thus making a building exciting again. Dramatic shapes, such as arches, quoins or window and entranceway treatments can be incorporated economically to create a new image. Dryvit's newest finish, Custom Brick, offers tremendous design flexibility through a wide array of patterns, colors, textures and shading techniques. The selection of architectural details with Custom Brick is endless whereas the cost-effective design options of 'traditional' brick are very limited. Let us help you plan your next restoration or retrofit project with Dryvit products. Assistance and further information is available from Dryvit UK Ltd, call Customer Service at 01462 819555. Dryvit manufacturing plants are accredited to ISO 9001 standard, the worldwide common denominator for product consistency and excellence. This certification helps identify Dryvit as the recognized leader in EWI technology.

## Restoration Products Selection Chart

Substrate/ Surface	SUBSTRATE/SURFACE PREPARATION			LEVELING COAT OPTIONS				COATING/FINISH OPTIONS		Full Dryvit System
	Must be Cleaned and Prepared	Prymit <sup>®</sup>	Color Prime <sup>™</sup>	AC 100 <sup>™</sup>	Genesis <sup>®</sup> or Genesis DM <sup>™</sup>	NCB <sup>™</sup> or Freestyle <sup>®</sup>	Weathercoat <sup>®</sup>	Dryvit Finish	Weatherlastic <sup>®</sup>
