

TERRANEO & AMERISTONE

'Solid'... 'Stately'... 'Monumental' all describe buildings made of granite. Granite, like brick, is heavy and energy intensive to find, produce, and transport. To accommodate its weight, a building also requires more concrete and steel structural support – adding to the cost and environmental footprint of the project.

Incorporating a blend of quartz, minerals and mica, Dryvit's TerraNeo and Ameristone finishes are an environmentally sustainable, 21st Century alternative – allowing you to create the appearance you want without the cost, duration and environmental impact associated with heavier materials.
